

Front Loader

Ideal for farm work, the M5660SU's new Front Loader is fully integrated with a slanted boom that offers greater visibility and cleaner sight lines to the sides of the bucket and loader. The curved look is sleek too, matching the lines of the hood and the tractor's overall design.

Sturdy Steel Frame

The frame of the front loader maintains its sturdy, thick steel frame, but its design has been simplified by removing braces and connectors. This helps to lessen effort and shorten the time it takes to attach the loader and offers increased visibility.

Quick-Mount Attach/Detach

Attach or detach the front loader quickly without the use of tools. The boom stands and mounting pins make this task a snap, allowing an extra measure of productivity and tractor versatility.

2-Lever Quick Coupler

This standard M-Series feature makes attaching buckets, bale spears and pallet forks quick and easy.

4-Bar Linkage

A 4-bar bucket linkage system increases the rollback and dumping angle for quicker scooping and dumping.

3rd Function Valve

The optional 3rd function valve broadens the scope of the front loader operation by enabling the use of a grapple bucket and various other hydraulically controlled attachments. The 3rd function valve can be activated with buttons located on the grip of the joystick.

Greater Lifting Power

The M5660SU now features a more powerful boom that provides even greater lifting power and height, so you can get more work done with less effort. Two boom cylinder fulcrum positions (Power and Height) let you adjust the boom to fit the job. When doing bucket work, which requires greater power, set the boom cylinder to the Power position. When performing pallet fork or bale spear tasks, which benefit from higher lifting heights, set the boom cylinder to the Height position.

Joystick Control

An easy-to-operate joystick gives you complete control over the loader's movement and speed. The joystick is located in front of the control console for fast and easy access. The Series Circuit lets you simultaneously operate the boom and bucket, while the Regenerative Bucket Dump Circuit quick and efficient dumping.

Protected Cylinder Tubes

To better protect the tractor hydraulics and offer the operator more visibility, the hydraulic tubes are neatly tucked inside the loader boom. Hydraulic tube covers further provide protection from wear and tear.
